

Ryota Oshima, Blockchain & Full Stack Developer

1-chōme-1-3 Hirasawa, Niigata 947-0042, Japan, +81 90-7609-8879, ryota.oshima2026@gmail.com

Date of birth	2002.09.21	Nationality	Japanese
Place of birth	Niigata, Japan		

PROFILE	Blockchain Developer specializing in secure, scalable Web3 and fullstack systems using Solidity, Hardhat, React, Node.js, TypeScript, and PostgreSQL. Proven track record delivering end-to-end dApps and on-chain/offchain integrations that supported up to 25k+ monthly active users; led audits and optimizations that reduced contract vulnerabilities by 90% and onchain failures by 35%, while improving API throughput and latency by up to 50–60%. Hands-on experience with multichain (Ethereum, Polygon), CI/CD (Docker, GitHub Actions), upgradeable contract patterns, and mentoring crossfunctional teams to ship reliable product releases.		
---------	--	--	--

SKILLS	Solidity	Expert	Ethereum	Expert
	Smart Contract Development	Expert	Web3.js	Expert
	React.js	Expert	AWS	Expert
	Node.js	Expert	Docker	Expert
	TypeScript	Expert		

EMPLOYMENT HISTORY

Jul 2021 — Nov 2025	Full Stack Developer, BlueOrbit Labs Pte Ltd	Niigata, Japan	- Designed and built an end-to-end web application and Web3 integrations using React, Node.js/Express, and Solidity smart contracts, enabling secure on-chain/off-chain interactions and supporting 10k+ monthly users. - Implemented and tested smart contracts (Solidity) with Hardhat and Truffle; executed audits and fixes that reduced contract vulnerabilities by 90% and decreased failed transactions by 35%. - Optimized backend performance and database design (PostgreSQL) to increase API throughput by 40% and lower average response time from 450ms to 180ms. - Created CI/CD pipelines with GitHub Actions and Docker, automating build/test/deploy and cutting release time from multiple hours to under 15 minutes; managed staging and production rollouts. - Led cross-functional collaborations with product and QA teams, mentored 4 junior developers, and delivered 6 major feature releases on schedule.
Mar 2022 — Mar 2026	Full Stack Developer, Sakura Tech Solutions Co., Ltd.	Niigata, Japan	- Designed and implemented scalable dApps and REST APIs using React, Node.js/Express, Solidity, and ethers.js/web3.js; integrated MetaMask and WalletConnect for seamless wallet interactions and multi-chain support (Ethereum, Polygon). - Developed and audited 8 smart contracts with Hardhat, applied upgradeable patterns and gas optimizations that reduced average gas per transaction by ~30% and improved on-chain success rate by 28%. - Architected backend microservices and optimized PostgreSQL queries and caching layers, increasing API throughput by 50% and reducing latency by 60% under load. - Built automated CI/CD pipelines with Docker and GitHub Actions and expanded unit/integration test coverage, lowering deployment rollback rate by ~70%. - Collaborated with product, security, and QA teams; mentored 6 junior engineers and led delivery of 10+ product features, supporting growth to ~25k monthly active users.
Jun 2021 — Present	Blockchain Developer, NexisWave Systems Co., Ltd.	Niigata, Japan	- Lead development of secure, upgradeable smart contracts and on-chain components using Solidity and Hardhat, delivering 12+ contracts for token, governance and marketplace features. - Implemented multi-chain support (Ethereum, Polygon) and wallet integrations, improving user onboarding and increasing on-chain transaction success while reducing average gas per interaction by 25% through optimizations. - Built and maintained backend services and node infrastructure, improving DApp uptime to 99.9% and reducing incident response time through monitoring and alerting. - Introduced automated testing and CI/CD pipelines (Docker, GitHub Actions) to ensure reliable releases and shorten deployment cycles. - Collaborated with security teams to perform audits and remediation, mentored 3 junior developers, and coordinated cross-team deliveries to meet product milestones.

EDUCATION

Apr 2018 — Mar 2021	High School Diploma, Niigata Prefectural Shibata High School	Niigata, Japan
	Relevant coursework: advanced mathematics and programming fundamentals (Python). Led the programming club (12 members) and developed a JavaScript-based web app to manage school events. Independent study in blockchain fundamentals and basic Solidity development; deployed simple contracts to testnets.	
Apr 2021 — Mar 2025	Bachelor of Information Systems, Niigata University of International and Information Studies	Niigata, Japan
	Focused coursework: Data Structures & Algorithms, Databases, Computer Networks, Distributed Systems, Cryptography, and Software Engineering. Capstone project: designed and implemented a fullstack decentralized application (React, Node.js/Express, Hardhat, Solidity) with MetaMask integration and deployment to Polygon testnet, emphasizing upgradeable contract patterns and gas optimization. Gained practical experience in backend design, REST APIs, and collaborative software development workflows (Git, code reviews, CI/CD).
